

THERMAL COMBAT ID PATCHES AND PANELS

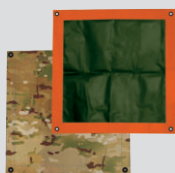

Thermal ID panels and patches made from a passive material (3-5 & 8-12 micron), intended for outdoor use, will reflect thermal energy when exposed outdoors (on a clear day, sky temperature can drop to -30°C) and appear as a contrasting cold area on thermal device. Typical detection distance is 500m to 5km, depending on devices used and climatic conditions.

THERMAL ID PATCHES FOR HELMET
